Diamond Brown

ASSOCIATE SOFTWARE ENGINEER | REACT | JAVASCRIPT | C#/.NET | REST APIs

Atlanta, Georgia | diamondbrown.tech@gmail.com | LinkedIn: in/diamond-brown

PROFESSIONAL SUMMARY

Software Engineer Analyst with enterprise experience developing and supporting frontend web applications using React, TypeScript, Redux, C#/.NET, REST APIs, PostgreSQL, and Microsoft SQL Server. Experienced in translating requirements into API-connected application changes, debugging UI and data behavior, building automated regression tests, supporting CI/CD delivery workflows, and documenting technical processes. Brings Java and Spring Boot training, accessibility-focused UI work, and clear cross-functional communication.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, Redux, HTML5, CSS3, Web Accessibility

Backend and APIs: C#/.NET, REST APIs, JSON, Java, Spring Boot, API integration

Data and troubleshooting: SQL, PostgreSQL, Microsoft SQL Server, Splunk, local debugging

Testing and delivery: Mabl, JavaScript test automation, NUnit, regression testing, Git, Jira, Confluence, Agile Scrum, CI/CD workflows

Systems and documentation: Application troubleshooting, requirements documentation, developer onboarding, workflow analysis, technical documentation

PROFESSIONAL EXPERIENCE

ADP | Software Engineer Analyst | February 2023 - Present

- Develop and support enterprise benefits-enrollment applications using React, TypeScript, Redux, C#/.NET, REST APIs, PostgreSQL, and Microsoft SQL Server within Agile Scrum delivery practices.
- Build and maintain frontend features and API-connected workflows, collaborating with development and business stakeholders to translate requirements into application changes.
- Participate in CI/CD delivery workflows by coordinating code, testing, and deployment activities for application changes.
- Investigate application issues using Splunk, SQL queries, and local debugging to isolate UI, API, and data-related behavior and support production issue resolution.
- Build reusable Mabl and JavaScript regression tests and NUnit tests for C#/.NET logic; centralize test assets with naming standards, reusable procedures, and documentation.
- Led a frontend accessibility refactor toward WCAG standards and maintain accessible UI content, articles, and PDFs.
- Reduced developer onboarding from two weeks to three days by documenting development and environment setup in clear Confluence guides.

GemsForge | Founder and Digital Solutions Analyst | 2024 - Present

- Analyze and improve small-business workflows across account access, file storage, business listings, website tools, and operational systems.
- Build structured documentation, repeatable workflows, and REST/JSON integrations that make technical tools easier for nontechnical users to adopt and maintain.

Xpanxion / UST Step IT Up | Java Full-Stack Developer Apprentice | September 2022 - February 2023

- Completed Java full-stack development training and built a Spring Boot REST API for online I-9 form completion; served as elected team captain for project communication.

SELECTED PROJECTS

- Built and documented REST and JSON integrations between Apple Shortcuts and the Notion API, resolving header, request-body, property-formatting, and data-type issues.
- Designed spreadsheet-based relational registries using stable IDs, parent-child relationships, controlled fields, lookups, and formulas to improve data consistency and retrieval.
- Audited workflows and migrated structured information between platforms while preserving content, metadata, relationships, naming standards, and portability.

LEADERSHIP AND EDUCATION

Army National Guard — Staff Sergeant and Squad Leader | May 2013–Present. Lead training, personnel accountability, readiness, task coordination, and mission preparation.
Bachelor of Science — Georgia State University, May 2018
Certificate of Completion of Apprenticeship, Application Developer — U.S. Department of Labor, 2023
U.S. Secret clearance
